Mark:

The intent of paragraph 29.b was to allow the Bunker Hill Mine operator to store up to the sill of 10 Level as needed for mine water storage during diversion activities. It's at the discretion of the mine operator to drain the mine pool lower, but at no point should it exceed the sill of 10 level. As always coordination with the CTP operator is a critical task to be incorporated into draw down and/or filling activities as there may be a shift water quality. The CTP operators have informed me that you've been doing a great job of coordinating with them.

Thanks much,  
Ed

**Subject:** Fwd: Question for EPA

Good morning Ed

David with Hummingbird asked me the question below. Would you be able to respond stating we are able to pump the mine water pool lower than the 11 level please?

Thanks Ed  
Mark

Hi Mark,

As discussed we would be keen to get confirmation from the EPA that the below clause of the EPA agreement does not restrict in anyway the mine to dewater below the 11 level.

29. b. Mine Pool Storage Volume: Purchaser shall provide storage volume using all void space (the mine workings) from a minimum of 30 feet below the sill of 11 Level at the No. 2 Raise to the sill of 10 Level at the No. 2 Raise

Regards,

David.
